Content

Introduction

Chapter 1: General introduction 9

Part 1: Characteristics of depression trajectories in an older primary care population

Chapter 2: Distinct developmental trajectories of late-life depression, their predictors and their association with health care costs and quality of life 27

Part 2: Measurement of depression in patients with DM2 and/or CHD

Chapter 3: Measurement properties of depression questionnaires in adult patients with type 1 or type 2 diabetes: a systematic review 47

Chapter 4: Diagnostic accuracy of the Patient Health Questionnaire-9 for assessment of depression in type 2 diabetes mellitus and/or coronary heart disease in primary care 79

Part 3: Effectiveness and cost-effectiveness of the Step-Dep study

Chapter 5: Cost-effectiveness of a stepped-care intervention to prevent major depression in primary care patients with type 2 diabetes mellitus and/or coronary heart disease and subthreshold depression: Design of a pragmatic cluster-randomized controlled trial 111
Chapter 6: Effectiveness of a stepped-care program to prevent major depression among primary care patients with type 2 diabetes mellitus and/or coronary heart disease and subthreshold depression

Chapter 7: Cost-effectiveness of a stepped care program to prevent major depression among primary care patients with type 2 diabetes mellitus and/or coronary heart disease and subthreshold depression

**Reflections on the presented work**

Chapter 8: General discussion

Chapter 9: English summary, Nederlandse samenvatting, Dankwoord and List of publications
