# List of Figures

2.1 Full channel connections for 3 to 18 members. ........................................... 29
2.2 Three types of relations for the speed factor depending on number of nodes: left: $\eta_A$ increasing linearly as the number of members increases middle: $\eta_A$ increases up to a limit, due to a weighted speed factor right: $\eta_A$ increases according to an advanced logistic function ............................... 30
2.3 Comparison for scenario 1(a) between the 3 speed factors ......................... 35
2.4 Scenario 3 and the different speed factors used to calculate the emotion levels ................................................................. 35

3.1 Methodology for tuning the questionnaire questions weights (left). Methodology for tuning the traits for each participant (right). ............... 45
3.2 Mean and standard deviation for the 100 best solutions using the grid search. .............................................................................. 47
3.3 Mean and error for the 100 best solutions using the grid search for openness (blue bars) and the solutions obtained with the questionnaires alone (green bars). .................................................... 48
3.4 Mean and error for the 100 best solutions using the grid search for expressiveness (blue bars) and the solutions obtained with the questionnaires alone (green bars). .................................................... 48

4.1 Network structure of the experiment. ................................................. 60
4.2 Physical Activity Level achievement of participant EXP01 during 30 days. 61
4.3 Graphs with trendlines of real data and simulation results of the model. 65

5.1 Number of nodes in each of the components .......................................... 75
5.2 The network components used for the community analysis in scenario 2. 77
5.3 Physical activity levels (PALs) of connected vs. not connected participants during 84 days of the intervention, including linear trendlines. 79
5.4 Physical activity levels (PALs) of community vs. non-community participants during 84 days of the intervention, including linear trendlines. 80

6.1 Degree distribution in days 1, 100 and 336 (top) and $p$ value for slope, R squared and standard error (bottom) .......................................... 96
6.2 Degree of the richest nodes (left) and number of poor nodes, with $\text{degree} \leq 2$ (right) ................................................................. 97
6.3 Percentage of the nodes in the largest component. All nodes (lower red line) and nodes with degree larger than 1 (higher green line) .......... 98
6.4 Components analysis. Number of components in the graph over the time (upper), the correlation between the size of the component and the frequency of the size (days 1, 165 and 335) (middle) and the parameters from the linear regression for all time steps (lower) .... 99
6.5 Mean of all centrality measures for all nodes at each time step (six graphics on top) and average shortest path (bottom)  

6.6 Centrality for most central nodes. Betweenness (upper left) and closeness (upper right) for the 20 nodes with the highest combined centrality. Lower graphic shows the combined centrality measures  

6.7 Homophily according to the BMI (left) and gender (right) of the nodes  

6.8 The dynamic relation between ego network density and nodes' degrees  

7.1 Predictions of the simple linear model (left) and the combined model (right).  

7.2 Average predictions of the two models (green: linear, blue: combined), and the empirical data (red).  

8.1 Grid search for the general questions.  

8.2 Simulated annealing space of search explored for the general questions.  

8.3 Simulation of average PA for all the strategies for the different percentages of targets in the three rows. The left column shows the results for the network generated with all questions. The center column is for the network generated with the general questions set. The right column shows the results for the network generated using the friendship question alone.  

9.1 Temporal causal network model  

9.2 Experimental dataset: Easily influenced person  

9.3 Experimental dataset: Difficult to influence person  

9.4 Scenario 1: all states  

9.5 Scenario 1: input and output states  

9.6 Scenario 2: all states  

9.7 Scenario 2: input and output states  

9.8 Scenario 3: Outputs of person 1 as inputs for person 2  

9.9 Simulation for mathematical analysis  

10.1 Computational model for political changes and reactions towards web media messages.  

10.2 Simulation of conservative message to liberal agent.  

10.3 Simulation of conservative message with neutral sentiment to liberal agent.  

10.4 Interpretation of the message for agent 1, message B.  

10.5 Changes on political position for agent 3.  

10.6 Changes on political position for agent 3.  

10.7 Changes on political position for agent 3.  

11.1 Tagging application  

11.2 Bag-of-words feature representation  

11.3 Training set accuracies  

11.4 Classification report for political (Y) and non-political (N) tweets
## List of Tables

4.1 Parameters for personal and social characteristics. ......................... 55
4.2 Statements measuring expressiveness and openness. (Reversed statements are marked by *.) ................................................. 59
4.3 Structural characteristics of the network. .................................... 61
4.4 Comparison of line tendency between contagion model and real data\(^a\) and comparison of line tendency between contagion model and real data after removing trendlines with a slope less than 0.03 \(^b\). Correct predictions\(^c\) are shown in the last row. ....................... 62
4.5 Mean Squared Errors of prediction lines ..................................... 63
5.1 Meta-Properties of Intervention and Control Groups of Scenario 1 .... 74
5.2 Meta-Properties of Selected Components (Intervention Group) of Scenario 2 ................................................................. 76
5.3 Characteristics of Participants in Selected Components (Intervention Group) of Scenario 2 ....................................................... 78
5.4 Detailed Characteristics of Component E ..................................... 78
5.5 Analysis using multiple linear regression for scenario 1 .................. 80
5.6 Analysis using multiple linear regression for scenario 2 ................. 81
5.7 Physical activity level data in long format for community and non-community individuals for scenario 2 ................................. 81
5.8 Analysis of scenario 1 using generalized linear regression ............... 82
5.9 Analysis using linear mixed effects modeling for scenario 1 .......... 82
5.10 Comparison of standard linear regression model with random intercept model for scenario 1 .................................................... 83
5.11 Analysis of scenario 2 using generalized linear regression ............. 83
5.12 Analysis using linear mixed effects modeling for scenario 2 .......... 84
5.13 Comparison of standard linear regression model with random intercept model ................................................................. 84
7.1 Model evaluations ................................................................. 116
8.1 Density of the networks generated by the different subsets of questions. 128
8.2 Hamming Distance between the three graphs generated by the subsets of questions ........................................................... 129
8.3 Ratio between boys and girls per class and amount of targets for each fraction selection ....................................................... 133
8.4 Best threshold and factor of change for the three networks generated with (1) all questions, (2) general questions and (3) friendship question 136
8.5 Differences between initial and end mean PA for the network generated with all questions and 20% of the nodes selected for intervention. .... 136
8.6 Differences from the mean PA for each intervention to the simulations without any intervention. The results are referred to the network generated from all the questions combined. .......................... 137

9.1 External and internal states of the model ........................................ 151
9.2 The resulting MSE, steepness and threshold after tuning. ............... 155
9.3 Initial values of the input states of scenarios 1 and 2 ..................... 155
9.4 Initial values of the input states of the two persons in scenario 3 .... 158

10.1 States in the model ................................................................. 174
10.2 Traits of the simulated agents .................................................. 176
10.3 Initial states for the simulated agents ........................................ 176
10.4 Messages used for the simulations ............................................. 177

11.1 Keywords used to filter the tweets collected ................................. 191
11.2 Feature extraction example ....................................................... 191
11.3 Collected tweets ..................................................................... 192
11.4 Cross validation results ............................................................ 198
11.5 Test set results ........................................................................ 198
