

Table of contents

| | | |
|---------------------------|---|------------|
| Chapter 1 | General introduction | 9 |
| Chapter 1 appendix | Response to: 'A dose–response relationship between severity of disc degeneration and intervertebral disc height in the lumbosacral spine' | 21 |
| Chapter 2 | Poroelastic behaviour of the degenerating human intervertebral disc: a ten-day study in a loaded disc culture system | 25 |
| Chapter 3 | Are axial intervertebral disc biomechanics determined by osmosis? | 45 |
| Chapter 4 | Osmosis and viscoelasticity both contribute to time-dependent behaviour of the intervertebral disc under compressive load: a caprine in vitro study | 61 |
| Chapter 5a | Minimally Invasive Micro-Indentation: mapping tissue mechanics at the tip of an 18G needle | 75 |
| Chapter 5b | Stiffening of the nucleus pulposus upon axial loading of the intervertebral disc: an experimental in situ study | 89 |
| Chapter 6 | Early changes in the extracellular matrix of the degenerating intervertebral disc, assessed by Fourier Transform Infrared spectroscopy | 101 |
| Chapter 7 | General discussion | 119 |
| Appendices | Nederlandse samenvatting | 136 |
| | Dankwoord | 139 |
| | Publications | 142 |
| | About the author | 146 |
