# TABLE OF CONTENTS

**Chapter 1**  General introduction and outline of this thesis  7  
**Chapter 2**  Prognostic effect of different PD-L1 expression patterns in squamous cell carcinoma and adenocarcinoma of the cervix.  29  
**Chapter 3**  Indoleamine 2,3-dioxygenase expression pattern in the tumor microenvironment predicts clinical outcome in early stage cervical cancer.  51  
**Chapter 4**  Classical and non-classical HLA class I aberrations in primary cervical squamous- and adenocarcinomas and paired lymph node metastases.  79  
**Chapter 5**  High-efficiency lysis of cervical cancer by allogeneic NK cells derived from umbilical cord progenitors is independent of HLA status.  101  
**Chapter 6**  High and interrelated rates of PD-L1^+^CD14^+^ antigen-presenting cells and regulatory T cells mark the microenvironment of metastatic lymph nodes from patients with cervical cancer.  123  
**Chapter 7**  Nodal metastasis in cervical cancer occurs in clearly delineated fields of immune suppression in the pelvic lymph catchment area.  145  
**Chapter 8**  CD14^+^ macrophage-like cells as the linchpin of cervical cancer perpetrated immune suppression and early metastatic spread: a new therapeutic lead?  163  
**Chapter 9**  Summarizing discussion and future directions  171  
**Chapter 10**  Nederlandse samenvatting  191  
**Addendum**  PhD portfolio and list of publications  199
