Table of contents

Chapter 1  General introduction  6
Chapter 2  Standard biobanking conditions prevent evaporation of body fluid samples  22
Chapter 3  Effect of long-term storage in biobanks on cerebrospinal fluid biomarker Aβ1-42, T-tau, and P-tau values  32
Chapter 4  Unbiased approach to counteract upward drift in cerebrospinal fluid amyloid-β 1–42 analysis results  44
Chapter 5  How to handle adsorption of cerebrospinal fluid amyloid-β (1–42) in laboratory practice? Identifying problematic handlings and resolving the issue by use of the Aβ42/Aβ40 ratio  64
Chapter 6  Pre-analytical stability of novel cerebrospinal fluid biomarkers  86
Chapter 7  Pre-analytical stability of array-based proteomics for cerebrospinal fluid biomarkers  106
Chapter 8  Stability of progranulin under preanalytical conditions in serum and cerebrospinal fluid  138
Chapter 9  Neurogranin as cerebrospinal fluid biomarker for Alzheimer’s disease – an assay comparison study  156
Chapter 10  Diagnostic performance of Elesys immunoassays for cerebrospinal fluid Alzheimer’s disease biomarkers in a non-academic, multicentre memory clinic cohort: the ABIDE project  180
Chapter 11  Summary and general discussion  200

Appendices  Nederlandse samenvatting  218
