# TABLE OF CONTENTS

1. General introduction and outline of the thesis .................................................. 9
2. Prevention of age-induced N(ε)-(carboxymethyl)lysine accumulation in the microvasculature ................................................................. 17
3. Major orthopedic surgery significantly increases plaque area in atherosclerotic ApoE -/- mice ................................................................. 33
4. LPS-induced systemic inflammation does not alter atherosclerotic plaque area or inflammation in ApoE3*Leiden mice in the early phase up to 15 days ................................................................. 51
5. Systemic inflammation enhances mast cell density in coronary arteries in patients who died of myocardial infarction ........................................ 67
6. Mast cells are increased in the media of coronary lesions in patients with myocardial infarction and may favour atherosclerotic plaque ........ 85
7. Validation of simplified 18F-FDG uptake metrics for quantitative assessment of inflammation in atherosclerotic plaques after major surgery . 105
8. Analysis of the effect of major orthopaedic surgery on atherosclerotic plaque inflammation in large arteries using 18F-FDG PET/CT. Study outline and preliminary results ........................................ 125
9. Inflammatory cell content of coronary thrombi is dependent on thrombus age in patients with ST-elevation myocardial infarction ............. 141
10. Inflammatory cells are not significantly increased in aspirates of coronary thrombi of STEMI patients with microvascular injury ............... 159
11. Summary and general discussion ..................................................................... 177
    List of publications ............................................................................................ 193
    Curriculum vitae ................................................................................................ 197
    List of co-author affiliations .............................................................................. 201
    Dankwoord/Acknowledgements ...................................................................... 205
