Table of Contents

1 Introduction  1
1.1 Motivation  1
1.2 Transport in economics  2
1.3 Road congestion  4
1.4 Policy remedies  5
2 Road congestion and public transit  1
2.1 Introduction  1
2.2 Theoretical background  5
2.2.1 The road supply curve  6
2.2.2 The demand for transport  8
2.2.3 The effect of public transit strikes  8
2.2.4 Equilibrium  9
2.2.5 Welfare analysis  9
2.3 Empirical Approach  12
2.4 Data  16
2.4.1 Rome  16
2.4.2 Public transit in Rome  17
2.4.3 Transit strikes in Rome  18
2.4.4 Motor-vehicle traffic data  20
2.4.5 The effect of road congestion on bus travel times  24
2.5 Empirical Results  26
2.5.1 Welfare losses of motor-vehicle travelers  26
2.5.2 Travel time losses of bus travelers  32
2.5.3 The congestion relief benefit of public transit  34
2.6 The long-run congestion relief benefit of public transit for Rome  39
2.7 The effect of public transit subsidies given adjustments in public transit supply  41
2.8 Conclusion  43
Appendix 2.A1: Figures and Tables  45
Appendix 2.A2: Sensitivity Analysis of the effect of public transit share on travel time  50
Appendix 2.B: Public transit fares and motor-vehicle demand  51
Appendix 2.C: Aggregate model for Rome adapting Parry and Small (2009)  53
3 Road supply curve estimation and marginal external congestion cost  55
3.1 Introduction  55
3.2 Empirical strategy  58
3.3 Data and descriptive statistics  61
3.4 Estimation results  65
3.5 Sensitivity analysis  69
3.6 Welfare implications  71
3.7 Conclusion  74
Appendix 3.A  76
4 Does public transit reduce car travel externalities? Quasi-natural experiments’ evidence from transit strikes  79
4.1 Introduction  79
