Table of contents

Chapter 1  General introduction  
Chapter 2  Notch signaling is impaired during inflammation in a Lunatic Fringe-dependent manner  
Chapter 3  Inflammation-induced endothelial to mesenchymal transition promotes brain endothelial cell dysfunction and occurs during multiple sclerosis pathophysiology  
Chapter 4  Specialized pro-resolving lipid mediators are differentially altered in multiple sclerosis and attenuate peripheral inflammation and blood-brain barrier dysfunction  
Chapter 5  Pro-resolving lipid mediator Lipoxin A4 attenuates neuroinflammation in experimental autoimmune encephalomyelitis by modulating T cell responses and modifying the spinal cord lipidome  
Chapter 6  General discussion  
Chapter 7  Appendices:  
• English summary  
• Nederlandse samenvatting  
• Sommario  
• Curriculum Vitae  
• List of publications  
• Acknowledgments
