Part 1: Introduction

Part 2: Novel approaches to assess clinical symptoms of Alzheimer's disease

Chapter 2.1 A composite measure of cognitive and functional progression in Alzheimer's disease: Design of the Capturing Changes in Cognition study

Chapter 2.2 Detecting functional decline from normal aging to dementia: Development and validation of a short version of the Amsterdam IADL Questionnaire

Part 3: Psychometric evaluation of the cognitive-functional composite

Chapter 3.1 A novel cognitive-functional composite measure to detect changes in early Alzheimer’s disease: Test-retest reliability and feasibility

Chapter 3.2 Impairment in complex activities of daily living is related to neurodegeneration in Alzheimer’s disease-specific regions

Chapter 3.3 Assessing cognition and daily function in early dementia using the Cognitive-Functional Composite: findings from the Catch-Cog study cohort

Part 4: Measuring clinical changes over time

Chapter 4.1 The Cognitive-Functional Composite is sensitive to clinical progression in early dementia: Longitudinal findings from the Catch-Cog study cohort

Chapter 4.2 Identifying sensitive measures of cognitive decline at different clinical stages of Alzheimer's disease according to the NIA-AA 2018 research framework

Part 5: Summary and general discussion
